Label instructions for building your own can:

1. Pick one of the two label sizes:

Smaller can label is blue and fits a standard metal can.

Larger can label is white and fits a tall chip can with lid.

2. Print the label you have selected on your laser or ink-jet printer.

3. Trim the label out using the crop marks printed on the label.

If your can is larger or smaller than the label adjust your trim size.

If you are using the white label it will not need to be trimmed out.

3. Use tape, double sticky tape or spray mount on the back of the label.

You only need to apply the adhesive to the left and/or right edges of the label.

4. Line up the label top to the top of the can just under the rim.

Smooth the label onto the can as you move around the can still keeping the top edge aligned.

The end edge of the label should overlap forming a seam.

5. With a marker write your name under “Because of you” ... on the back of the can.

Now you too can turn pocket change into changed lives.
